Abstract ii

1 Introduction 1
- 1.1 Integer Quantum Hall Effect and Edge State . . . 1
  - 1.1.1 Integer Quantum Hall Effect . . . 1
  - 1.1.2 Hall Conductivity and Chern Number . . . 1
  - 1.1.3 Edge States . . . 4
- 1.2 Topological Hall Effect in Spin-charge Coupled Systems . . . 5
  - 1.2.1 Spin Berry Phase . . . 5
  - 1.2.2 Theory for the Topological Hall Effect . . . 6
  - 1.2.3 Experimental Indications . . . 8
- 1.3 Quantum Anomalous Hall Effect in Frustrated Spin-charge Coupled Systems . . . 11
  - 1.3.1 Quantum Anomalous Hall Effect on a Kagome Lattice . . . 11
  - 1.3.2 Spontaneous Scalar Chiral Order on a Triangular Lattice . . . 12
  - 1.3.3 Magnetic Vortex in Scalar Chiral Phases . . . 13
- 1.4 Purpose of This Thesis . . . 15
- 1.5 Organization of This Thesis . . . 16

2 Model 17
- 2.1 Kondo Lattice Model . . . 17
- 2.2 Related Models . . . 17
  - 2.2.1 Periodic Anderson Model . . . 17
  - 2.2.2 Hubbard Model . . . 18

3 Method 20
- 3.1 Partition Function . . . 20
- 3.2 Kernel Polynomial Method . . . 21
- 3.3 Langevin Sampling . . . 25
- 3.4 Automatic Differentiation . . . 25
- 3.5 Computational Cost . . . 26

4 Results **28**
4.1 Edges . . . 28
4.1.1 Details of the Simulation . . . 28
4.1.2 Langevin Dynamics . . . 30
4.1.3 Reconstructed States . . . 34
4.1.4 Penetration Depth . . . 38
4.1.5 Connected Edges . . . 41
4.1.6 Comparison to Non-scalar Chiral States . . . 42
4.2 Domain Walls . . . 43
4.2.1 Details of the Simulation . . . 45
4.2.2 Langevin Dynamics . . . 48
4.2.3 Reconstructed States . . . 55
4.3 Vortices . . . 56
4.3.1 Details of the Simulation . . . 58
4.3.2 Langevin Dynamics . . . 60
4.3.3 Reconstructed States . . . 65

5 Summary **68**

A Boltzmann Distribution in the Langevin Equation **71**

B Size Dependence **73**
